

The Coronavirus outbreak (COVID-19) is evolving quickly with new information. The CDC is monitoring the situation and working closely with federal, state and local health departments. Vitality Living is closely monitoring guidance and expectations set by state and federal officials. We realize this may cause further adjustments to our procedures outlined below. We remain 100% committed to limiting exposure to our residents, families and team members.

As with influenza and other viral infections, older adults are at increased risk for severe illness. COVID-19 is spread by respiratory droplets from those who are in close contact with one another, about 6 feet. While there is not yet evidence for spread from surfaces or objects, this may also be a possible mechanism of transmission.

Vitality Living is continuing to follow our infection control protocols. The current strategy includes:

- **All visitations are currently suspended until further notice.**
- **All employees and vendors are screened via COVID-19 questionnaire.**
- **Frequent hand hygiene with alcohol-based hand rub or soap and water, washing for at least 20 seconds.**
- **Frequent disinfecting of commonly touched environmental surfaces to decrease environmental contamination.**
- **Standard precautions, such as wearing masks, gloves and gowns as situations warrant their use.**

Consistent with good routine practice, signs are posted at our facilities refusing visitors. This applies whether there is COVID-19 activity in the community or not. The steps outlined above will stay in place until April 1st, as we continue to closely monitor this situation and adjust policies and practices as set by state and federal officials.

YourLife Senior Management and Vitality Living Management teams have continued working diligently to keep our residents and team members safe. We continue to establish and implement new disinfectant and cleaning protocols, on top of our daily cleaning protocols, to include the following products upon delivery to each building that have been highly recommended by the manufacturing companies industrial hygienist with 30 years of experience in this special field.

- **TOMI Environmental Solutions, Inc.'s SteraMist™ Binary Ionization**
- **Technology (BIT) Solution**
- **Binary Ionization Technology® (BIT™) Solution SDS**
- **BIT™ Solution Ready-To-Use Hydrogen Peroxide**
- **Mediclean Germicidal Cleaner**

These products are also approved by the EPA and provide specific labeling to kill COVID-19 Coronavirus. Our communities are also taking every safety precaution necessary to include strict hygiene protocols with our staff members.

Thank you in advance for supporting our protocols in and assisting with keeping our residents, families, and team members safe.
